Marco Minetti

Madison, WI | marco@marcominetti.it | 608-658-8295 | GitHub | marco-minetti.github.io

Education

University of Wisconsin-Madison — Madison, WI
Computer Science (Intended), College of Letters & Science | Mathematics Certificate. — *Expected May 2028*
Relevant Coursework: Programming III, Data Structures, Computer Architecture, Operating Systems, Systems Programming in C, Discrete Mathematics, Linear Algebra

Purdue University Northwest — Hammond, IN
Computer Science Coursework. Dean's List. GPA: 4.0. — *2024 – 2026*

Skills

AI/ML: LLM retrieval workflows, AI agents, prompt engineering, machine learning modeling
Languages: Python, Java, C, C++, C#, JavaScript, SQL, PHP, HTML/CSS
Tools & Frameworks: Git/GitHub, GitHub Actions, Linux, MATLAB, Svelte, Vue.js, Unity, Unreal Engine 5, OpenMP

Experience

AI Engineer Intern — Summer – 2026
Reply — *Turin, Italy*
- Developed an LLM-based knowledge system ("LLM Wiki") for Unipol, one of Italy's largest insurers, grounding responses to support tickets across a knowledge base of 1,000+ internal documents.
- Implemented document-retrieval and prompt workflows to surface relevant internal knowledge and produce context-aware ticket responses for insurance operations.

Computer Science Intern — Summer – 2025
Virtualitics — *Los Angeles, CA*
- Built 2 Python automation tools and 2 GitHub Actions workflows to streamline testing and deployment.
- Optimized C# code in Unity for an AI/ML visualization application, improving performance and usability.

Computer Science Intern — Summer – 2023
Sirius S.R.L., Energy Automation — *Turin, Italy*
- Developed a YouTrack-integrated web application using Svelte and a C# REST API, including Gantt-chart visualization.
- Collaborated on internal employee tools and end-to-end features to improve workflow efficiency and usability.

Computer Science Intern — Summer – 2022
Links Management & Technology — *Lecce, Italy*
- Built a gamified Vue.js application that rewarded users for completing real-world missions and shipped end-to-end features with the development team.

Research Experience

- Undergraduate Researcher, Machine Learning | Purdue University Northwest | Fall 2025 – Spring 2026
- Project: Predicting Course Performance Using Behavioral and Academic Indicators through Machine Learning
- Developed MATLAB machine learning models to predict student academic performance and compare regression and classification approaches.
- Analyzed academic, behavioral, and demographic features across datasets to evaluate prediction accuracy and model performance.

Projects

Dibs — Full-Stack Campus Marketplace — Summer 2026
Node.js, Express, PostgreSQL
- Built an end-to-end campus marketplace with authentication, listings, favorites, real-time WebSocket chat, Stripe payments and webhooks, and a Capacitor mobile wrapper.

Trader Analyzer — Spring 2025
C, OpenMP
- Built a trading-analysis tool supporting arbitrary-length market data history and accelerated computation by 2.5x with OpenMP.

Activities & Leadership

Leadership
- QuantumLeap Club, Treasurer; Investments Club, Vice President; PNW STEM Student Union, Officer (2024–2026)

Activities
- Computer Science Club, Programming Competition Club, Mathematics & Statistics Club (2024–2026), Agentic AI UW

Languages
- Italian (native), English (fluent)
